

SUSTAINABLE MASTER TAGS

The Master Tag is now printed on recycled & recyclable plastic

MasterTag will use almost 1 million pounds of recycled plastic that could have otherwise ended up in a landfill.

This means less use of virgin raw material resources that must be extracted from the earth to produce.

The plastic used in the production of this product is 100% consumer recyclable in many community recycling programs.

Provides growers, retailers and consumers an opportunity to participate in sustainable actions by ensuring that material is put back into the production stream, reducing the need for raw material resources.

For more information, contact Grimes Horticulture at 1-800-241-7333.
